

Please reject the Nat'l Assoc of Broadcasters petition (04-160) regarding satellite radio broadcast of local traffic and weather. They are just afraid of competition. The NAB is fighting for a industry that is stagnant from a lack of real competition. XM offers huge variety that "normal" radio used to before a few corporations purchased every independent station. I pay for these services, therefore, it is not any of the NAB's business what programming satellite radio offers.
